

Publication Ethics Statement for Statistics and Applications

All submissions to Statistics and Applications, the Journal of the Society of Statistics, Computer and Applications, should conform to the following and include statements of conflict of interest and confirmation of ethical approval, wherever required.

1. The author(s) should ensure that they have written entirely original manuscripts/works, and if the author(s) has/have used the work and/or words of others then the same has been appropriately cited or quoted. The publication(s) that has/have been influential in determining the nature of the reported work should also be properly cited. Plagiarism in all its forms constitutes unethical publishing behaviour and is unacceptable.
2. Author(s) should present their results clearly, honestly, and without fabrication, falsification or inappropriate data manipulation and should strive to describe their methods clearly and unambiguously so that their findings can be confirmed by others. The manuscript/paper should contain sufficient detail and references to permit others to replicate the work.
3. Author(s) should not in general publish manuscripts describing essentially the same research in more than one journal or primary publication. Submitting the same manuscript to more than one journal concurrently constitutes unethical and is unacceptable.
4. Authorship should be limited to those who have made a significant contribution to the conception, design, execution, or interpretation of the reported study/research work. All those who have made significant contributions should be listed as co-authors. Where there are others who have participated in certain substantive aspects of the research project, they should be acknowledged or listed as contributors. The corresponding author should ensure that all appropriate co-authors and no inappropriate co-authors are included on the paper, and that all co-authors have seen and approved the final version of the paper and have agreed to its submission for publication. Authors should take collective responsibility for submitted and published work.
5. Funding sources and relevant conflicts of interest should be disclosed.
6. If any significant error or inaccuracy is noticed by any of the authors in their published work, it should be promptly notified to the Editor or publisher.
