

Statistics and Applications

Contents Volume 11, Nos. 1&2, 2013 (New Series) Special Issue in Memory of Professor MN Das

Preface

Dr. M.N. Das: A Brief Profile

1. Some finer aspects of the de la Garza phenomenon: a study of exact designs in linear and quadratic regression models 1
- Bikas K. Sinha, Nripes K. Mandal and Manisha Pal*
2. One-at-a-Time Designs for Estimating Elementary Effects of Simulator Experiments with Non-rectangular Input Regions 15
*- Fangfang Sun, Thomas J. Santner and Angela M. Dean**
3. Optimal design for prediction using local linear regression and the D_{S1} -criterion 33
*- Verity A. Fisher, David C. Woods and Susan M. Lewis**
4. Some pairwise additive cyclic BIB designs 55
*- Kazuki Matsubara and Sanpei Kageyama**
5. Making Experimental Designs Robust Against Time Trend 79
*- Nam-KY Nguyen**
6. U-statistics approach to Hollander-Proschan test for NBUE alternatives 87
*- Sudheesh K K and Isha Dewan**
7. Optimal choice of covariates in the set-up of crossover designs 93
*- Ganesh Dutta and Rita SahaRay**
8. Group Testing Designs: A Combinatorial Marvel 111
- S. B. Rao, Bikas K. Sinha and Prasad Rao*
9. Controlled Sampling: A Review 127
*- Raghunath Arnab**
10. Detection of outliers in designed experiments in presence of masking 147
- Lalmohan Bhar, V. K. Gupta and Rajender Parsad*
